

# iBOOST PRO

Unlock the true potential of variable speed pumps

VARIABLE FLOW RETURN

Maintain velocity and circulation at even the lowest speeds

# iBOOST PRO

The all-new **iBOOSTPRO** eyeball from Spa Electrics offers a revolution in low speed circulation performance.

If you prefer the quieter operation and energy cost savings of running your pool pump on low speeds, the **iBOOSTPRO** eyeball is the perfect match.

Its improved circulation performance enables energy efficient use of your pump for longer periods.

As the pump speed reduces, the patented **iBOOSTPRO** eyeball constricts and maintains water velocity; ensuring water circulation and filtration effectiveness, at even the lowest speeds.

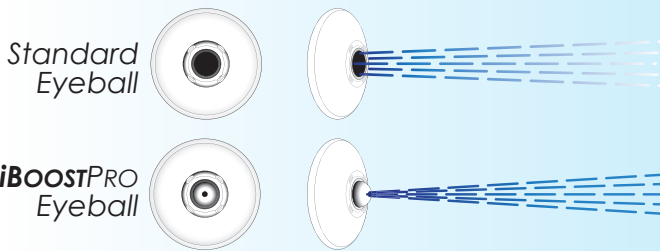

Designed to fit standard return fittings; you can now enjoy quieter pump operation and significant energy savings.

Leave it to the **iBOOSTPRO** to quietly work with your pump, while you relax and enjoy your beautiful pool!

The patented dynamic eyeball at the center of the **iBOOSTPRO** can vary its opening; so as the pump speed reduces, the opening constricts to maintain water velocity.

## INCREASED CIRCULATION PERFORMANCE

INCREASED WATER VELOCITY, SPREAD & REACH AT LOW PUMP SPEEDS

## ENERGY COST EFFICIENCY

At High Pump Speed **Low Efficiency**

At Low Pump Speed **over 230% Increase in Efficiency**

Our **iBOOSTPRO** eyeball is manufactured in Australia and backed by Spa Electrics' industry leading USA customer care network. For more information on the Eyeballs and our other products, please visit: [www.spaelectrics.com](http://www.spaelectrics.com)
